Chemigation Injection Systems
Precise application of high crops inputs as you irrigate.

Global technology:
Since 1983, we’ve distributed metering pumps to every corner of the globe utilizing irrigation to raise sustainable crops. The engineered reliable design make it ideally suited for years of service.

Environmentally safe:
Utilizing a high quality fluid injection pump enables you to precisely provide what your crops need while reducing the environmental impact. With Agri-Inject equipment, there are other benefits of reduced drift and reduced labor and energy costs. Agri-Inject also offers convenient options to provide even further assurance of environmental safety.

Economical to operate:
Lower operating costs at high volumes make the Agri-Inject® and System Pumps especially effective for applying fertilizers, chemicals, and other concentrates through high pressure and irrigation systems.

Future of precision agriculture:
Today we’re on the cusp of a dynamic growth of precision farming within the global agricultural industry. Agri-Inject products are perfectly in sync with precision agriculture. They are the cost effective way to apply precise amounts of fertilizer and crop protection products at precisely the right times during the growing season. That’s sound “precision strategy” for improving yields and ensuring crop health for many years to come.

Where to buy:
Agri-Inject products are distributed globally through authorized dealer network. Each dealer has a solid reputation for responsive service and technical support. When you’re irrigating, you can’t afford to wait for answers. You’ll find the support you need from Agri-Inject just around the corner.

Eliminate the guesswork of pump selection and pump rate calibration.

In sync with your precision agriculture
Apply to the right time, right place and at the right rate to ensure profound crop health.

Double Duty Irrigation
Be ready to inject within five minutes and accurately apply.

Timely
Less expensive and you will never again wait for a custom applicator.

Simple and easy to calibrate
Don’t need to wait longer than five minutes and accurately apply.

Cost Savings
One time investment pays you back application after application, field after field, season after season.

Uniform coverage
No skips, no skip rows, no need to shut down or scale.

Chemigation Injection Systems
The safe, effective, economical way to treat your crops.

“Chemigation Injection Systems
The safe, effective, economical way to treat your crops.

“We have around 220 injection systems in place with our customers throughout the upper Columbia basin. They’re nearly used for fertigation, but some are also used for chemigation of crops that include potatoes, wheat, mint and corn. These systems include a mix of Agri-Inject units and a competitor branded systems. Since we’ve settled the waters with the customers with the two options and as part of our services, we’ve been trying to convert 16 to 15 units per year over to Agri-Inject. They’re much easier to calibrate and you don’t have to shut down the systems to calibrate the micrometer with Agri-Inject. We have a few 15 gallon per hour units on the job, but most of them are 30’s and 50’s. We certainly can’t afford to upgrade all the units at once, but we definitely prefer the Agri-Inject models over the others—change them over. They just never fail to us.”

“Neutralizing” means adjusting the pH of soil solutions to help make nutrients more available to your crops. “Micro-Injection” means the application of just 8 oz. of liquid fertilizer to each 100 gallons of water. And “Chemigation” is the process of mixing and injecting fertilizer into irrigation water to precisely deliver high volumes of nutrients to the soil. All Agri-Inject precision systems are the United States’ original.”
Chemigation Injection Systems

Turnkey system that is ready for immediate chemigation

Containment Chemigation Injection Systems

Chemigation Injection Systems

Lower costs... Higher yields... Timely applications... Time savings. That’s the winning formula chemigation delivers to growers across the nation and around the world.

Designed for applying fertilizer, herbicides, insecticides, fungicides and other liquid products to a wide range of crops, an Agri-Inject® chemigation injection system can be fitted to most center pivot, linear sprinkler, drip and solid set irrigation systems. Choose from a wide variety of models designed to fit every application and every farm. Standard Chemigation Systems offer capacities of 70, 110 and 200 gallons, while large capacity systems feature tanks up to 600 gallons.

Key Product Features

- Easily fitted to most center pivot, linear sprinkler, drip and solid set irrigation systems
- Containment units provide added environmental safety, ideal for avoiding spills when using expensive chemicals
- Powerful pump and agitation system for high performance and long life
- Agitation is standard on all sizes
- Available in three phase, single phase and 12-volt DC and most international electrical configurations

Used for:

- Pre-emergent herbicides, high rate insecticides, fungicides.
- Tank Capacities: 60- and 90-gallon tanks available in containment systems. All are engineered to fully mix chemicals and completely drain.

- Early fitted to most center pivot, linear sprinkler, drip and solid set irrigation systems
- Containment units provide added environmental safety, ideal for avoiding spills when using expensive chemicals
- Powerpump and agitation system for high performance and long life
- Agitator is standard on all sizes
- Available in three phase, single phase and 12-volt DC and most international electrical configurations

WARRANTY

5 YEAR PUMP
